Trillium Gift of Life Network Switches to CUSTODIOL® HTK

Methapharm is proud to announce the addition of Ontario's Trillium Gift Of Life Network to its roster of preferred customers.

TGLN has made CUSTODIOL® HTK their flush and preservation solution of choice for all abdominal organs.

CUSTODIOL® HTK is indicated for all organs and provides a low viscosity flush similar to that of water, which may reduce the risk of biliary complications.

The low potassium content of CUSTODIOL® HTK solution does not require flushing from the organ prior to transplantation and has been shown to reduce OR times.

CUSTODIOL® HTK is cost effective and represents a lower cost per donor case which may help our customers maximize resources and allocate funds to other areas of need within their organizations.

TGLN joins our growing list of OPO's and Transplant centers including:

- Halifax QEII MOTP
- St. Luc Montreal
- Ottawa Hospital
- Kingston
- Hamilton
- London MOTP
- Winnipeg

CUSTODIOL® HTK is the registered trademark of Dr. Franz Köhler Chemie GmbH, and is marketed in Canada by Methapharm Inc, in Brantford Ontario.

For further information please contact Rob Sanderson 1.800.287.7686 x7231, to review more data in detail or to discuss how we can tailor a program with CUSTODIOL® HTK for your transplant center.
